

simple line drawn with Bezier tool.

I have selected fill - no paint and stroke paint red,
yet this leads to red fill, not a red stroke

same problem with shapes.
I tried to change the red outline of this
rectangle to blue, but it changed the
fill color instead.

A screenshot of the Adobe Illustrator interface. The main canvas shows a text box with a diagram and text. The diagram consists of a black Bezier curve with a red fill underneath it, and a cyan rectangle with a red outline. The text in the box explains a problem with the fill and stroke settings. The right side of the screenshot shows the 'Fill and Stroke' panel, which is currently set to 'Fill' and shows a red color selected. The 'Stroke' panel is also visible, showing a red color selected. The 'Layers' panel at the bottom shows the 'Text and Font' layer selected. The status bar at the bottom right shows the coordinates 'X: -711.43 Y: 1281.43' and a zoom level of '70%'.
