

Example using PDF+Latex in Inkscape 0.48.
Graphs do not render well in the final PDF
document.

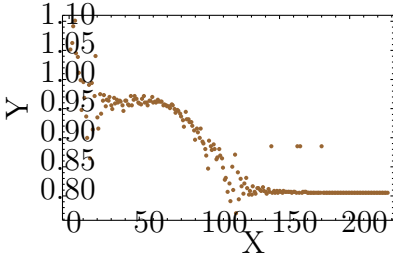

Figure 1: Notice the zero of the abscissa (X axis) is under the numbers of the ordinate (Y axis), which is not the way it appears in the original .svg file (included).

A workaround for this could be enclosing with `{\tiny}` all the numbers in the graph by modifying the .pdf_tex file (see the enclosed -tiny.pdf_tex file). Unfortunately the numbers are still misplaced:

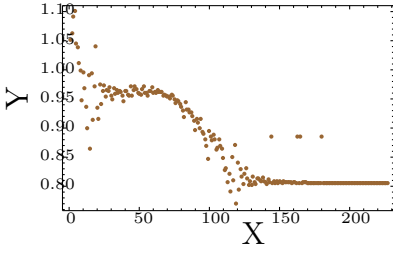

Figure 2: Making smaller the numbers of the axes makes it similar to the original file. Anyway the numbers are still misplaced.
